

METHODS FOR DELIVERING DNA TO MUSCLE CELLS
USING RECOMBINANT ADENO-ASSOCIATED VIRUS VECTORS

5

Abstract of the Disclosure

10 The use of recombinant adeno-associated virus
(AAV) virions for delivery of DNA molecules to muscle
cells and tissue is disclosed. The invention allows for
the direct, *in vivo* injection of recombinant AAV virions
into muscle tissue, e.g., by intramuscular injection, as
well as for the *in vitro* transduction of muscle cells
which can subsequently be introduced into a subject for
treatment. The invention provides for sustained, high-
15 level expression of the delivered gene and for *in vivo*
secretion of the therapeutic protein from transduced
muscle cells such that systemic delivery is achieved.
